GD-04P module

The GD-04P module is used for programming of the GD-04 David unit, GSM/GPS monitoring units CU-0x and car alarms new series CA-210x via USB port.

For programming of mentioned devices it is necessary to install the driver for correct functioning of devices connected via USB port. The driver with installation guide can be downloaded from www.jablotron.com section Downloads / Software.

The GD-04 unit requires GD-Link software. CU-*0x and car alarms CA-210x series server require C-link software. Both software works on OS Windows (XP or higher) only. It is free for download on our website. For programming it is necessary to use supplied cable.

The GD-04P module allows to connect PC via USB with CU, CA and GD units and to program the device using C-link or GD-Link software. Software C-link and GD-Link are intuitive and installation is automatic. Just download the installation pack and run the installation. When the installation is finished, software runs automatically. The program establishes a connection to the device and allows an easy setup of all parameters.

Specification

EMC   *EN 55022 and EN 50130-4*

CE JABLOTRON ALARMS a.s. hereby declares that thse products are in compliance with the essential requirements and other relevant provisions of Directive 204/108/EC and 2011/65/EU. The original of the conformity assessment can be found on the web site www.jablotron.com, Technical Support section.
